# Hubport™

USB Expansion

Industrial grade hubs offer instant Plug-and-Play USB connectivity.

Features/Benefits

> Add USB ports to a PC, server or thin client in minutes

> Four- and seven-port models to easily connect and power USB peripheral devices

> Individual port power management

> Lower total cost of ownership with user-installable, external solution – no need to open the chassis, reconfigure and reboot the system

> Also compatible with Inside Out Networks solutions like Edgeport®, Rapidport/4®, Watchport™ Series and Wavespeed™/LAN

Overview

Hubport offers a simple solution for adding USB ports to a PC, server or thin client. This external, user installable solution plugs into a standard USB port and provides four or seven additional USB ports for instant peripheral device connectivity.

Use the Hubport to connect USB peripheral devices such as printers, mice or scales, as well as to stack and power additional Inside Out Networks solutions like Edgeport USB-to-serial converters and Rapidport/4 USB RAS for added flexibility. EdgeUSB technology offers the ability to operate Inside Out Networks solutions on Microsoft® Windows NT and NT Embedded systems – an industry first.

The application possibilities are virtually endless: add Plug-and-Play USB compatibility to an older PC or laptop; connect USB peripheral devices at an office workstation; or add multiple Edgeport USB-to-serial converters to a legacy-free system for scalable I/O expansion. Feature-rich design, extensive operating system support and reliable performance make Hubport/4 and Hubport/7 ideal for mission-critical environments.

Inside Out Networks, a Digi International company, is the leader in enterprise USB connectivity. Digi International, the leader in Connectware, makes device networking easy by developing products and technologies that are cost-effective and easy to use. With over 20 million ports shipped worldwide, Digi has been offering the highest levels of performance, flexibility, and quality since 1985.
