

Supercharge your headset

Switch between your computer and phone at the touch of a button

The ZoomSwitch ZMS10 is a USB add-on device that allows your phone headset to double as a computer headset. With the ZoomSwitch ZMS10, you expand the functionality of your existing office headset (or telephone handset receiver) by connecting through your computer's USB port. Switch between your desk phone and your PC at the touch of a button. It's simple and powerful.

Take a look at some of the communication activities that are possible through a ZoomSwitch-engaged headset. Because your office headset takes the place of the computer's speakers and microphone, all computer audio content and playback now stays private.

- Listen to music between calls
- Make calls using VoIP, Skype and similar applications
- Review online voicemail messages
- Dictate into speech recognition software

- Listen to online webinars, training, product demos
- Use with Avaya, Cisco and Nortel or other softphones
- Engage in video chats
- Participate in online video conference calls

ZMS10 Features & Benefits

Flexibility

As a headset accessory, the ZoomSwitch can be used with your existing headset system. You choose which headset style works best for you, then add on a ZoomSwitch and give your phone headset added access to your PC.

Ease of use

The ZoomSwitch is plug and play, takes only moments to install and operates with just a touch of a button. Quick and easy toggling between the phone and computer means no missed calls.

Increased functionality

Because the ZoomSwitch creates the connection among your headset, phone and computer, you no longer need both a phone headset and a computer headset. Your phone headset now doubles as a computer headset. One headset for all your communication needs.

Privacy

The ZoomSwitch lets your headset speakers and microphone take the place of those on your computer so all playback stays private. No need for an extra microphone or speakers – it all goes through your headset.

Immediate connectivity

Powered through the USB port on your computer, the ZoomSwitch is a plug-and-play device that is ready to work when you are.
